Subject: RE: OT estimate Boston

Julie, We did 94 hours of overtime this past month. About 98 % of the items were simple marijuanas(One bag per item analyzed). We analyzed approximately 778 items during this time. That is an average of 8.28 items / hour. This included the time to sign out and verify samples, analyze the sample, and record the results. It doesn't include the input of results and printing of certs by the office, the checking and notarizing of certs by the chemists and the return of all items to the office. This number is much higher then I would expect for routine testing of VM during regular working time, since no ancillary work was done that we normally do during regular time.

Recap OT 94 hours 778 marijuana items tested average 8.28 tested/ hour During regular time expect 25-30/day

Normal Testing Boston and Amherst 184.80 items (all types)analyzed per month / chemist (based on Feb 08- Nov-08) no OT

184.8 items / 150 hours per month per chemist = 1.23 items per hour/ chemist

We handle our samples differently than Amherst. We send our samples to GC/MS where a different chemist does the second test in batches, so its very difficult to come up with times for specific testing. Also, things like Mushrooms and THC quants are extracted overnight, then they go to MS or LCMS and may not get tested immediately. CBS

Subject:

The District Attorneys are starting to notice that it is taking much longer to get samples tested and are suggesting collection of fine/fees to support testing. In order to respond to their inquiries Grace Connolly has asked that we collect some data:

- Where are we with overtime? Can we determine approximately how many additional samples we were able to test with the OT?
- Can we determine how long it takes to test.
- log-in samples
- weigh a sample regular vs. trafficking
- perform screening tests
- confirmatory tests
- generate reports
- return samples

You can either estimate how long it takes or collect data for a week or so, that we can extrapolate from.
